Abstract (en)

The invention provides a blank suitable for forming into a urinary or like drainage bag hanger stand. The blank is in the form of a substantially rectangular piece of sheet material divided into a plurality of areas by means of fold-lines. The areas thus defined are a substantially rectangular front member and a pair of substantially triangular side members respectively connected by fold-lines to opposite side edges of the front member. In addition, each side member has connected thereto by a fold-line along its edge remote from the front member one of a pair of connectable rear flaps, which together include connectable parts. Also, the front member includes one or more portions constructed or arranged to accommodate a drainage bag or a bag and its associated tubing. A pack to provide a body fluid drainage system, comprises a blank according to the invention and one or more e.g. seven, body fluid drainage devices.
