Abstract (en)

[origin: US4685182A] A radially deflectable impression cylinder, such as an impression cylinder for cooperation with a rotogravure printing cylinder. The impression cylinder includes a shell which is freely rotatably mounted on a stationary axle by means of annular members carrying a plurality of spaced rolling element bearings. At least an intermediate one of said annular members is radially displaceable in order to deflect the shell of the cylinder so that it assumes a bowed shape when viewed from the side.
