Abstract (en)
[origin: US4937065A] Halogenated hydrocarbons are reacted in a reactor at temperatures up to 1000 DEG C. with greater-than-stoichiometric amounts of calcium and/or magnesium silicates in a reactor for the chemical-thermal degradation of the halogenated hydrocarbons. Neither dioxins nor furans are formed in the waste gas in this process.

Abstract (de)
Zur chemisch-thermischen Zersetzung von Halogenkohlenwasserstoffen werden diese bei Temperaturen bis 100° C mit überstöchiometrischen Mengen von Calcium- und/oder Magnesiumsilikaten in einem Reaktor umgesetzt. Es entstehen hierbei weder Dioxine noch Furane im Abgas.
