Abstract (en)

[origin: WO8603473A1] A piece of package material intended to surround both longitudinal sides of the tablet is cut on one longitudinal side of the tablet at both its ends, bent around the tablet with the remainder material portion, and welded or sealed along the side edges of the tablet to form a package material hose. Both ends of the package material hose which exceed the ends of the tablets are backfolded. The lower longitudinal part which covers the hole surface of a face of the tablet is folded about the bent ends and is connected to the package by sealing or welding.
