Abstract (en)

[origin: EP0205796A2] In a compact compressor aggregate having a screw-type compressor in which are situated an air intake filter (7), an oil filter (5) and a fine oil separator (6), the intention is, on the one hand, to minimise the overall size and, on the other hand, to achieve a user-friendly arrangement of the filters to be exchanged. The intention is, in addition, to guarantee better and more reliable functioning of the oil filter (5) and of the fine oil separator (6). For this purpose, while the screw-rotor axes are aligned horizontally, parallel to the axis of the housing, the axes of the filters (5, 7) and of the fine oil separator (6) extend in a housing plane extending perpendicular to the axis of the housing. All the filters (5, 6 and 7) can be serviced from the top side of the housing. <IMAGE>
