Abstract (en)

The device for handling submerged loads comprises lifting means carried by a submerged structure (2) connected to at least three positioning cables (3, 4, 5) having one end fixed to anchoring points (6, 7, 8). It is characterised in that the submerged structure comprises flotation means (12-16), and in that the positioning cables (3, 4, 5) extend between the submerged structure (2) and the anchoring points (6, 7, 8). <IMAGE>
