Abstract (en)
[origin: EP0206990A1] The arrangement comprises two foundations (1) located at a distance from one another and a plurality of reinforced U-shaped or E-shaped concrete carrier elements (5) supported on these on both sides and arranged next to one another. This avoids compacting the ground in the region of the tree roots, makes it easier to attend to the tree, increases the effect of ventilation and watering systems, reduces the influence of de-icing salts and keeps convenience of use unrestricted in this region. <IMAGE>
