Abstract (en)

[origin: EP0207055A2] 1. Continuous casting plant having a mould (2) mounted on a frame-like lifting table (1) reciprocating relative to a supporting construction (4), which lifting table is guided by means of guides relative to the supporting construction (4) in the axial direction (5) of the mould cavity (6), wherein on the supporting construction (4), two eccentric shafts (7, 7') - directed in parallel to each other and each being arranged at one frame side (8, 8') of the lifting table (1) - are provided, each extending approximately over the entire frame side (8, 8') of the lifting table (1) and at each of which the lifting table (1), close to its corners (24), is supported by supporting means (16), which are articulately mounted on the eccentric shafts (7, 7'), characterised in that the supporting means are designed as connecting rods (16), always two connecting rods (16) arranged at the ends of one of the eccentric shafts (7, 7') are rigidly interconnected and supported in common on a supporting axle (17, 18, 19), which in turn is supported on the corners (24) of the lifting table (1).
