Abstract (en)

[origin: EP0207263A2] A hydraulic saw blade tensioner with a saw buckle having a wedge which, by means of at least one comb-like strip, is brought positively by the recesses in this comb-like strip into a position in which the wedge comes to rest approximately in the centre of the pistons. Despite this positive positioning of the wedges during the tensioning operation by means of the pistons, the wedges can be displaced in the longitudinal direction as a result of their grooves when the wedges are in their foremost position. <IMAGE>
