Abstract (en)

A device for locating and showing a portion of strip material comprises a length of strip material (30) passing over a base portion (10) and wound between two spools (40) which are in turn located at each end (16,17) of the base portion (10) by an upper portion (11) attached over the base (10). In use the strip (20) is wound over a flat portion (14) of the base (10) which together with a corresponding aperture (30) in the upper portion (11) forms a window thereby exposing selectively any portion of the strip material.
