Abstract (en)
[origin: WO8604039A1] The holder for a waste-disposal bag, to be installed in a confined space such as the interior of a passenger automobile, has a mounting bracket (11) secured to an upright wall to which a rectangular frame (12) is articulated for swinging about a horizontal pivotal axis from a depending position into a level position in which it is arrested by a stop. A lid (13) overlying the frame is biased by a torsion spring (25) into a closure position and has an edge portion (13a) projecting beyond the frame engageably by a user's finger for swinging the frame from its depending position into its level position and, thereupon, lifting the lid off the frame in the same motion to give access to the bag (15) suspended from a rectangular insert (14) inside the frame. The insert, which like the frame and its lid consists of plastic material, is resiliently indexed in the frame and rests against internal abutments thereof which are integral with a ledge forming an abutment for the torsion spring. A plastic pin (22) with a barb (22b) passes through two lugs in the lid and through a sidewall of the frame from one of two pivots for the lid, locking itself onto one of these lugs.
