Abstract (en)
[origin: WO8606645A1] The device is designed to connect rolling tracks or sections of rolling tracks comprised of band-like track elements each comprised of a central part suitable for vehicles and raised guiding elements arranged on either side of the central part and formed of hollow bodies open on the lower side. Rolling tracks or sections of rolling tracks arranged side to side are interconnected without using a tool since a common connection spittable element (5) provided with two clamping bodies (7) rigidly connected to each other is rigidly but removably engaged into the voids (4'') of the guiding elements of each of the track elements (4) of which the guiding elements (4'') are arranged next to each other.
