Abstract (en)
[origin: EP0208824A1] 1. Process for the manufacture of insulating blocks for the dry piling of walls and partitions using blocks consisting of a standardized series of hollow casing blocks of the same height composed of concrete mortars and wood shavings mineralized and agglomerated in the cement, after these have hardened, an insulating element in expanded polystyrene is fixed, characterized by the fact that blocks and insulating elements are then recalibrated together so as to obtain insulating blocks all presenting an identical height both of the insulating block itself and of the insulating element fixed to the block.
