Abstract (en)
[origin: EP0208864A2] Piston pump connected to an oscillating machine component, in particular a creel frame, the said pump being actuated by a cam, the cam being moved to and fro by the accelerations of the oscillating machine component. Via its periphery, the cam presses against the piston of the pump and is arranged in such a way that, in both its dead centre positions, it presses the piston to the greatest extent into the pump block and thus exerts the greatest pressure at the instant of the greatest accelerations. <IMAGE>
