Abstract (en)  
1. Electric coil bobbin (1), suitable for automatic conveyance to a winding device and for automatic winding, having a winding space bounded by flanges (2) and an open-edge flange cutout (11, 23) in which a locating nose (12, 20) arranged on the mandrel of the winding device engages during winding in such a way that the coil bobbin can be wound without rotating, characterized in that at least in sections the flange cutout (11, 23) has seating faces for a wedge-shaped locating nose (12, 20), which can be guided radially and resiliently against the coil bobbin (1).
