Abstract (en)
The invention relates to a laundry washing and drying machine (10) comprising within an unitary housing structure (11) a drying section and a laundering section each provided with a respective drum (13, 68) for containing the laundry and actuated by a single motor (33). The machine is provided with a unitary structure (11) forming part of the drying air circuit and adapted to be oscillated about the charging opening of the drying section (17) between an engagement position and a disengagement position with respect to said motor (33). Also provided are means (22, 23, 24, 25, 38) for the transmission of the driving power to the drum (13) and to a blower (21) of the drying section, means (56, 57) for oscillating said unitary structure (18, 19, 20) and means (62, 63) for ensuring the transmission of the driving power from said motor (33) to the drying section.
