Abstract (en)

[origin: WO8604144A1] Peptide fragments of certain apolipoproteins have been found to be both immunogenic and capable of eliciting antibodies with highly apolipoprotein-specific immunoreactivity. These antibodies, in labeled and unlabeled form, as well as the labeled synthetic peptide fragments, are useful in the production of immunodiagnostic procedures and kits for quantitating type-specific apolipoproteins. Both competitive assays and immunometric assays are disclosed.
