Abstract (en)

[origin: US4712486A] An aerial ropeway transport installation comprises cars coupled to the rope by detachable grips. On the line the cars run in groups but are widely spaced in order to spread the load. In the terminal the cars are uncoupled from the rope at a corresponding location of a platform by an individual control device, the cars of any one group stopping one behind the other. The rope speed is temporarily slowed down or stopped during each detachment and/or attachment operation.
