Abstract (en)

[origin: EP0210651A2] A rotary body (12) located within a treating tank (1) is electro-magnetically rotated, and by means of a rotary body, such treatments, as mixing, stirring, agitating, kneading, dispersion and the like will be effected. The rotary body is made of conducting material and an electro-magnetic coil (10) which generates a revolving magnetic field is located adjacent the rotary body. Since the rotary body is separated from a driving source, the treating tank provided with the rotary body can be made sealable.
