Abstract (en)
A vehicle door hinge has a first leaf (1) carrying a fixed hinge pin (4), and a second leaf (5) having a bore (7) for receiving the hinge pin, the hinge pin and the bore being adapted to co-operate to permit assembly and separation of the hinge leaves only at a predetermined relative orientation of the leaves. In a preferred embodiment this is achieved by a flat retaining head (4b) on the hinge pin passing through a slot (8) in the end of the bore (7).
