Abstract (en)

Footwear performing an automatic massage during the walk, having a shoe sole (1) with its inner surface smooth and continuous under the whole foot sole, and which is provided at its outer side, in the metatarsal area, with a thickness (6,8,9) gradually decreasing from the edge up to the level of the third metatarsus (51); said thickness remaining always at the outside of the receptacle for the foot. Said thickness allows a massage of the skin and of the muscles of foot sole in the area of metatarsus of the three centre joints, whereinto many neurosensible and neuroregulator ducts converge, to be obtained on walking.
