Abstract (en)  
[origin: EP0211453A1] Sliding door comprising at least two sections (1, 2) each suspending from rollers (10, 16) carried by a guide rail (11, 18) for each section, said rollers descending into recesses (12, 17) in the related guide rail (11, 18) when closing the door, said door sections (1, 2) being mutually coupled when the door is in its closed position such that said sections (1, 2) are moved together when opening the door and till a door section (2) has reached its final position after which the other section (1) can be moved along said first mentioned section (2) and can be brought into its fully opened position, in which position said two door sections (1, 2) are coupled again and will move together when closing the door till the first mentioned section (2) has reached its closed position and the coupling is released so that the other section (1) can be brought into its closed position too.
