Abstract (en)

Railway, comprising rails (2) which find support via elastic supporting layers (3,3'6,7,) against supporting surfaces (1,4,5). The supporting surfaces (1,4,5) are for instance artificial substructures. The supporting layers (3,3') are formed of a synthetic resin, containing finely divided cells. For obtaining a low construction the rail (2) has no foot and the supporting surfaces (4,5) are arranged in a recess in the artificial substructure.
