Abstract (en)

[origin: WO8801329A1] Process for manufacturing construction components for façades, in particular structural elements. To obtain construction components which can be easily and simply applied to a wall even subsequently, and in order to provide excellent heat insulation, it is envisaged that these construction components are made from a mixture consisting essentially of plastic foam and a smaller proportion of cement and water. This mixture can, after hardening, be shaped by grinding, if desired.
