Abstract (en)  
[origin: EP0212001A2] The invention relates to a covering (1) which, lying within the gable profile (1.1), can be installed in the same way on one side or on both sides. The covering (1) is guided sealingly along its lateral limitations (1.7) and, in the closed position, bears against a fence profile (1.7.1). By means of articulated connections (2.1), the covering members (2) are thus interconnected in an articulated manner in a horizontal parallel arrangement, and in the descending direction these are each equipped with an overlapping strip (2.2) which, directed towards the surface of the following covering member (2), is equipped with a sponge-like sealing strip (2.3) or rests on such as this. Within the gable profile (1.1) there is formed a guide (1.5) for the covering (1), extending at a distance from and parallel to the loft floor surface (1.4) and having a load-bearing support (1.6) which carries the covering (1) in a horizontal position. The loft (1.3) is raised in the region of deflection of the covering (1) according to the deflection height (1.5.2) and forms a dormer window (1.3.1). <IMAGE>
