Abstract (en)  
[origin: EP0212160A2] A key switch (130) provided with a cardioid (138) and a cam follower (140) for protecting the operating position, is provided with an operating element (148) so that the switch can be triggered remotely via a triggering part (168) when, for example, a single-piece telephone in which the switch (130) is installed is placed on the associated rest (164). The operating element (148) is connected to the cam follower (140) such that the latter no longer engages with the cardioid (138) when the operating element (148) is swivelled over the triggering part (168). <IMAGE>
