Abstract (en)
[origin: EP0212901A1] In a friction disc clutch assembly of the type including a flywheel (12) secured to a drive shaft, a clutch cover (40) having an outer peripheral rim (42) secured to the flywheel by means of a plurality of circumferentially spaced bolts (30) and being formed with an internal cylindrical surface (46), a pressure plate (50) mounted within the clutch cover in such a manner as to be rotatable with and axially displaceable with respect to the flywheel, a diaphragm spring (60) assembled within the clutch cover to bias the pressure plate toward the flywheel, and a clutch disc (80) splined to a driven shaft and interposed between the flywheel and the pressure plate, the outer peripheral rim (42) of the clutch cover is formed with a radial exhaust hole (44) located between each pair of the circumferentially spaced bolts (30) and extending outwardly from the internal cylindrical surface of the clutch cover to exhaust muddy water entered into the interior of the clutch cover.
