Abstract (en)

[origin: WO8504842A1] An optically codable material in the form of a surface, which is provided at least on one side with a thermal coating. By point-like heating of the thermal coating optical readable symbols or graphs can be produced. To improve the stability of said symbols, in particular when subjected to environmental influences of a chemical and mechanical nature, the thermal coating is covered by an UV laquer (acrylic polymerisate). The basic support consists of PVC foil.
