Abstract (en)

1. Device for the orderly arrangement of sheets, in the form of a folder having a plurality of sections which can be folded against one another and are joined by readily bent strips (3, 4, 5), the first section (A) of which is provided on its inside surface with means for receiving the sheets, the second section (B) and third section (C) of which are roughly the same width and together have a width corresponding to the width of the first section (A), and the fourth section (D) of which, when the first section (A) is in a first inclined position, rests flat against the outer face of the first section (A) opposing the receiving means (1), and when the first section (A) is in a second inclined position, rests at an angle against the outer face of the first section (A) opposing the receiving means (1), the second section (B) alone serving the first section (A) as a desktop contact surface in the first inclined position, and the second and third sections (B, C) together serving the first section (A) as a desktop contact surface in the second inclined position, characterised in that the first section (A) and the fourth section (D) are constructed as end sections with free peripheral edges, that in the first inclined position the fourth section (D) rests with its outer surface flag against the outside face of the first section (A), in the second inclined position can be lodged by its free peripheral edge in a stamped groove disposed on the outside face of the first section (A) and when the folder is shut forms a closure flap, and that the receiving means are constructed as inert pockets (1) for note sheets, said pockets overlapping one another in the manner of scales and being disposed in rows perpendicular to the readily bent strips (3, 4, 5).

Abstract (de)

Die die Gestalt einer zusammenklappbaren Mappe aufweisende Vorrichtung, die mehrere Reihen von schuppenartig sich überlappenden Einsteketaschen (1) für Merkzettel aufweist, hat gegenüber bekannten Vorrichtungen dieser Art den Vorteil, daß sie so gefaltet werden kann, daß der die Einstektaschen (1) tragende Teil A der auf einer Tischplatte aufgestellten Vorrichtung unterschiedliche Schräglagen enehmen kann.
