Abstract (en)

[origin: WO8604948A1] A piping nozzle for applying jointing material in the construction of masonry walls or facades includes a housing having an outlet (12) for jointing material which is introduced under pressure into the housing interior through an inlet (19). In accordance with the invention there is arranged in the housing interior an inlet means (20) which is connected to the inlet and which presents a slot (21) which faces away from the outlet (12); and a dividing means (22) adapted to divide the jointing material exiting through the slot into two flows, which are guided towards the outlet opening for the purpose of mixing the jointing material.
