Abstract (en)
An apertured, autogenously bonded fibrous web substrate. A nonwoven web contains apertures with a consolidated or densified area surrounding each of the apertures to attract fluid and allow easy passage thereof through the nonwoven web. A novel sanitary napkin containing this perforated nonwoven web cover maintains a cloth-like texture and feel while remaining cleaner and drier during use. Rotary, aperturing apparatus of the present invention performs the process necessary to achieve the desired characteristics in the nonwoven web.
