Abstract (en)

[origin: WO8605254A1] The headlamp has a non-colour-corrected lens (15) which reproduces the edge of the mask (14) as a light/dark boundary (19, 20) of the light beam (18) on the road, and a correction element (16), which deflects the rays of the light beam (18) that form a colour fringe on the light/dark boundary (19, 20) in the light area of the beam. In this way the white light beam (18) prescribed by legislation is produced without the troublesome colour fringe.
