Abstract (en)
[origin: WO8605391A1] Dual purpose antiseptic fluids, which additionally to being effective skin disinfectants are also capable on drying to form skin protective film with residual antibacterial properties. These antiseptic fluids, while primarily applied as skin disinfectants for pre- and post surgery, dermatological infections, burn treatment as well as first aid for superficial wounds, cuts and abrasions, offer the additional advantage of a temporary or longer lasting skin and wound dressing depending on the film forming polymer used, without impairing the normal physiological activity of the skin. The invention also relates to medical surgical, and veterinary devices in particular to liquid applicators for antiseptic fluids to the human skin for medical, pre- and post surgical applications and first-aid.
