Abstract (en)
[origin: EP0215281A2] 1. A bearing for a leaf of a window, a door or the like, and constructed as the bottom bearing of a turn-and-tilt fitting, with a frame bearing part and a leaf bearing part (1), the frame bearing part comprising a bearing journal while the leaf bearing part comprises a bearing sleeve (2) with a bearing bore (19) provided at its upper end with an axially adjustable bearing member (30), characterised in that the bearing sleeve (2) is sub-divided into what is, in the position of use, an upper and a lower part by means of a transverse slot (16) extending substantially at right-angles to the bearing bore (19), the clear cross-section in the bearing bore (19) being adjustable in the region of the bottom part (17) of the bearing sleeve (2), the inner end (23) of the transverse slot (16) extending substantially through the geometrical bearing axis (5).
