Abstract (en)  
[origin: EP0215394A1] This application discloses an apparatus for perforating a plurality of web segments provided with holes received on stacking posts serving to retain the segments in a stack. The apparatus comprises a pair of simultaneously operable linear actuators (68) mounted on a support (70) located above the stack and through which support the output rods (74) project, a crosshead (76) fixed to the actuator rods, means (94) carried by said crosshead for compressing the stack, and means (84) also carried by said crosshead for perforating the stack, while compressed, to provide a line of weakness to facilitate separation of a portion of each web segment.
