Abstract (en)
[origin: EP0215991A1] The invention relates to building elements. The assembly of the building elements (1) consists of a bottomless container (2), vertical partitions (3, 4) delimiting, downstream, a large space (5) and, in the upstream direction, two smaller spaces (6, 7) by virtue of a partition (3) parallel to the upstream wall (8) of the container and by virtue of the perpendicular partition (4) connecting the said upstream wall (8) and the partition (3) parallel thereto. Notches (13) disposed on the lateral walls (14) of the container (2) enable the containers (2) to be nested in one another. The invention applies to retaining walls and noise-screening walls. <IMAGE>
