Abstract (en)
[origin: EP0216005A2] The invention relates to a screening machine for a multi-deck screening machine, designed according to the throw-type screening principle, for carrying out different screening tasks in a closed machine unit. The screening machine system according to the invention consists of the zones: prescreening stack, main screening stack, partial screening stack, secondary screening stack and return element which are mutually interchangeable and replaceable and can be combined to form system solutions.
