Abstract (en)

[origin: US4702038A] The invention illustrates a door seal comprising a permanently magnetic sealing member along the underneath edge of the door which at the end of the closing action moves at right angles to the direction of closing into the sealing position, and which co-operates with a magnetically active counterpart, whereby the movable sealing member and the counterpart run parallel in the closed position of the door, and the sealing member and/or the counterpart are guided so that they are movable.
