Abstract (en)
[origin: EP0216175A1] 1. A load transporting device which has beneath an intermediate suspending member (3) for suspending in a lifting device at least two pivotable clamping levers (6) mounted on crossbolts (5), which are connected to the suspending member (3) by a force transmitting and pulling element coupling the two clamping levers (6), characterized in that the clamping levers (6) are arranged between longitudinal walls (2) of a load crossbeam (1) connected to one another rigidly to form a frame and the load crossbeam (1) has the clamping levers (6) and opposed rails (17) fixes on the inside on the longitudinal walls which are provided with a plurality of recesses (18) spaced apart from one another.
