Abstract (en)

[origin: US4779782A] Guidance device for material traveling in strip form, especially for a sheet metal treatment plant, which includes a guidance roller (13) over which the strip (20) passes. This roller is carried by a movable structure (10) itself mounted on a fixed structure (1), so as to be capable of oscillating around an axis (Y-Y) contained in a median plane at right angles to the axis (X-X) of the roller, tangent to this roller and forming an angle of between 5 DEG and 30 DEG with the upstream length (21) of the strip.
