Abstract (en)
[origin: WO8605762A1] A container with a bottom panel (15), and opposed end and side panels (19 and 16) foldably connected to the bottom panel, erected to an upright position and forming corners therebetween. Opposite ends of each end panel have corner connecting members (25) foldably joined thereto where the corner connecting members form columns therein so that the columns are located adjacent the side panels of the container at a distance from the opposite end panel corresponding to the width of the container so that the cross stacking strength of the container is enhanced.
