Abstract (en)

[origin: EP0216978A1] 1. A process for extruding carbon compositions, more particularly carbon electrodes, a carbon composition (7) which has been introduced into a pressing cylinder (1) having a closable mouthpiece (3) first being squeezed by a pressing ram (4) with the mouthpiece (3) closed, then expelled from the cylinder (4) with the mouthpiece (3) open, characterized in that a back pressure opposing the forward pressure (pressing pressure) is exerted on the carbon strand (8) issuing from the mouthpiece (3).
