Abstract (en)

1. A rail vehicle including a device providing easy access to the vehicle during station stops, the device comprising a ramp (30) designed to be received beneath the floor of the vehicle while the vehicle is running and to be rested on a platform (1) during a station stop, and a guide and drive mechanism for the ramp situated beneath the vehicle floor, the vehicle being characterized in that the device comprises a sill (20) articulated between two extreme positions, namely a horizontal position while the vehicle is running thus constituting a portion of the floor (12) of the vehicle, and a sloping position constituting together with a portion (32) of the ramp (30) which is likewise sloping a continuous ramp providing access to the vehicle.

Abstract (fr)

La présente invention concerne un dispositif permettant un accès aisé aux véhicules ferroviaires lors des arrêts en station, comportant une palette (30) logée sous le plancher du véhicule lors du roulage de celui-ci et posée en appui sur un quai (1) lors d'un arrêt en station, caractérisé en ce que la palette est articulée sous le plancher du véhicule, ce dispositif comportant un seuil (20) articulé entre deux positions extrêmes, une position horizontale lors du roulage du véhicule constituant ainsi une partie du plancher (12) de ce véhicule, et une position inclinée constituant avec la palette, elle-même inclinée, une rampe continue permettant l'accès au véhicule.
