Abstract (en)
[origin: EP0217643A2] There is disclosed a method for processing a light-sensitive silver halide color photographic material comprising subjecting to imagewise exposure a light-sensitive silver halide color photographic material having a total dried film thickness of the light-sensitive silver halide emulsion layer and the non-light-sensitive layer on one surface of a support of 10 μ m or more, then processing the exposed material with a color forming developer containing substantially no benzyl alcohol, thereafter processing the material with a processing solution having fixing ability and subsequently processing the material with a stabilizing solution substituting for water washing having a surface tension of 8 to 50 dyne/cm and containing substantially no aldehyde compound, followed by drying.
