Abstract (en)

[origin: EP0217760A2] The invention relates to an electrical switch for window winders, provided with a sealing element, which comprises a box-like body to which is connected a pivoted key for the actuation of the electrical contacts. There is further provided a seal having a central body which defines a saddle for housing the pivot pin of this key, and a peripheral projection which surrounds the said saddle. The central body is surrounded by a flanged edge which can be clamped between the said box-like body and an outer frame.
