Abstract (en)
[origin: EP0218142A2] A rotary transmitter arrangement (10) is described which serves to transmit electrical signals between a stator system (14) and a rotor system (18) which executes a rotary movement with respect to the stator system. The rotor system has a number of rotary transmitters (11) which are no longer lined up next to one another in the axial direction as previously, but are built up one above another in the radial direction.
