Abstract (en)
[origin: EP0218840A2] A fluid-dispensing device is constructed as a single-action atomiser (1) whose entire fluid store (13) is formed by the pump chamber (14) of a pusher piston pump. The free-lying cylinder container (12) constructed as a trigger knob-like handle is therefore valve-free and can be opened exclusively towards the outlet channel (25). <IMAGE>
