Abstract (en)

[origin: EP0218897A2] 1. A running gear carrier for cableways, in particular single-cable circulatory cableways, preferably in the form of a clamping apparatus for suspension members which can be uncoupled from the cable (3), having at least one guide roller (11) which in the station runs in a guide rail (12, 13) which is enlarged in a funnel-like configuration towards the entry end and thus prevents swinging movements of the running gear in a plane which is normal to the cable characterised in that the guide roller (11) and/or its mounting is resilient in the radial direction.
