Abstract (en)  
[origin: US4736579A] A bobbin holder is provided for holding one or more bobbins of thread of varying heights in superimposed positions and adapted for being loosely and removably inserted into a bobbin carrier of a textile machine. The bobbin holder includes an elongate tubular body for receiving one or more hollow bobbins of thread on the outside thereof along the axial length thereof, mechanisms for varying the length of the elongate body for accommodating bobbins of varying heights, and a radially-outwardly-projecting support carried on the lower end of the tubular body for supporting the bobbin or bobbins of thread on the tubular body. The elongate body preferably comprises at least two tubular portions connected together at respective ends thereof by the length varying mechanisms.
