Abstract (en)

A display fitting for spectacles has a body (10) with a spine (16), formed with a series of recesses (18) one above the other, each recess suitable to receive the bridge (24) of a spectacle frame. Each recess (18) is flanked by a pair of holes (17) into which the ends of the earpieces (40) fit. When the spectacles have been mounted, a displaceable member (20,22) is moved to close off the mouths of the recesses and is locked, so that the spectacles cannot be removed until the member is unlocked and moved away from the recesses to enable the spectacles to be removed.
